

MNICS WORKING TEAM ASSIGNMENT WORKSHEET

TO: _____

DATE: _____

ASSIGNMENT: Review and/or reinforcement of the existing statewide resource availability list to determine if the current system is meeting statewide needs or are changes needed.

BACKGROUND: Situations were encountered this past fire season where resources on the statewide resource availability list were not available or released from the home unit when requested. Having these resources identified and available play a critical role in supporting initial attack activities that are expanding beyond the capabilities of local resources. Confirmation that the existing system works and emphasizing the fact that the identified resources are to be made available would ensure a smooth transition and movement of resources to where most needed.

EXPECTED PRODUCT FROM THE TEAM: Assurance that current statewide resource availability list and rotation is filling needs along with ensuring identified resources are truly available.
